Hong Kong domestic health spending: financial years 1989/90 to 2007/08

Abstract

This report presents the latest estimates of Hong Kong domestic health spending for financial years 1989/90 to 2007/08, cross-stratified and categorised by financing source, provider, and function.

Total expenditure on health (TEH) was HK\$78 946 million in financial year 2007/08, which represents an increase of HK\$4938 million or 6.7% over the preceding year. Represented as a percentage of gross domestic product (GDP), TEH increased from 3.6% in 1989/90 to 5.5% in 2003/04 and then decreased to 4.8% by 2007/08. Taking population growth into account, total health spending per capita (at constant 2008 prices) grew at an average annual rate of 4.9%, which was faster than the average annual growth rate of per capita GDP by 1.7 percentage points.

In 2007/08, government financing of health expenditure was HK\$38 809 million (49.2% of TEH), which was the first time it was surpassed by private spending (HK\$40 137 million) in the last decade as a result of its continued growth (averaging 8.4% per annum in real terms since 2002/03). The second important source of health financing was out-of-pocket payments by households (34.9%), followed by employer-provided medical benefits (7.8%) and private insurance (6.0%). A growing number of households (mostly in middle-to-high-income groups) have taken out pre-payment plans to finance health care. As such, private insurance has played an increasingly important role for financing private spending.

Of the HK\$78 946 million total health expenditure in 2007/08, HK\$75 413 million (95.5%) was for current expenditure and HK\$3533 million (4.5%) was for capital expenses (ie investment in medical facilities). Analysed by health care function, services for curative care accounted for the largest share of total health spending (65.6%), which was made up of ambulatory services (33.7%), in-patient curative care (27.8%), day patient hospital services (3.7%), and home care (0.5%). In response to the escalating demand for private health care, private hospitals had increased capital expenditure leading to an increase in investment in medical facilities from 2.2% to 4.5% of total spending over the period 2002/03 to 2007/08.

Analysed by health care provider, hospitals (43.1%) and providers of ambulatory health care (29.7%) were the two largest shares of TEH in 2007/08. Reduced public spending on hospitals in 2004/05 and 2005/06 brought the hospital share down after 2002/03, albeit the continued growth in corresponding private spending since 1997/98. Meanwhile, expenditure on providers of ambulatory health care accounted for a relatively stable share since 2003/04, following more than a decade of a decreasing trend.

Without taking into account capital expenses (ie investment in medical facilities), public current expenditure on health amounted to HK\$36 763 million (48.7% of total current expenditure) in 2007/08. The remaining HK\$38 650 million was made up of funds from private sources.

Expenditure on hospital care (HK\$33 994 million) was predominately funded by general government revenue (82.2%), whereas that on providers of ambulatory health care (HK\$23 439 million) was by private household out-of-

Fax: (852) 2855 9528 Email: tinyiukei@hku.hk pocket payments (60.2%). This reflects the mixed health care economy of Hong Kong, where public hospitals generally account for about 90% of total bed-days and private doctors (including western and Chinese medicine practitioners) provide about 70% of out-patient care.

Although both public and private spending were mostly expended on personal health care services and goods (92.0% of total current spending), their distribution among functional categories differed. Public expenditure was targeted at in-patient care (53.1%) and substantially less at out-patient care (24.3%). In comparison, private spending was mostly concentrated on out-patient care (45.7%), whereas medical goods outside the patient care setting (22.7%) and in-patient care (20.8%) comprised the majority of the remaining share.

Compared to the Organisation for Economic Cooperation and Development countries, Hong Kong has devoted a relatively low percentage of GDP to health care in the last decade. As a share of total spending, public funding (either general government revenue or social security funds) was also lower than in most economies with comparable economic development and public revenue collection base.

Introduction

This article presents the latest estimates of domestic health spending in Hong Kong, following the previous figures published in December 2010. It provides updated estimates of total expenditure on health (TEH) for the financial years 1989/90 to 2007/08 based on the established conceptual framework for Hong Kong Domestic Health Accounts (HKDHA), originally adopted from the System of Health Accounts. We also revised the previous estimates for the years 1989/90 to 2006/07, as more accurate data became available, allowing for retrospective comparisons and longer-term secular trend or time-series analysis.

The HKDHA is a set of statistics on health care expenditures, both public and private, in Hong Kong. It provides a detailed and complete picture of health care expenditures and facilitates comparison with other economies that adopt the same framework in calculating their health expenditures. Under HKDHA, health expenditures consist of all expenditures or outlays for medical care, disease prevention, health promotion, rehabilitation, long-term care, community health activities, health administration and regulation, and capital formation with the predominant objective of improving health.

The HKDHA is a product of collaborative effort by many government bureaus/departments, public organisations, and private institutions. It was compiled from a multitude of information sources. Most public expenditure data were derived from financial accounts, whereas private expenditure data were largely from survey estimates, and are subject to more uncertainties and reporting/recording errors.

The information contained in this report represents a basis for assessing and understanding trends and levels of health spending in Hong Kong. It enables the public, policy makers, and researchers to assess the performance of the local health system over time, and to evaluate health expenditure–related policies.

Total expenditure on health by financing source

In financial year 2007/08, TEH was HK\$78 946 million, which amounted to an increase of HK\$4938 million or 6.7% over the preceding year. In real terms, TEH grew steadily at an average annual rate of 6.1% throughout the period, from HK\$27 570 million in 1989/90 to HK\$79 618 million in 2007/08 at constant 2008 prices (Fig 1 & Table 1).

In comparison, real GDP grew at a lower average annual rate of 3.6% prior to 2003/04 but a higher rate of 7.2% between 2003/04 and 2007/08. Consequently, total health spending as a percentage of GDP increased from 3.6% in 1989/90 to 5.5% in 2003/04 and then decreased to 4.8% by 2007/08 (Table 1).

Between 1989/90 and 2007/08, per capita TEH grew from HK\$4849 to HK\$11 496 at constant 2008 prices, faster than per capita GDP by 1.7 percentage points per annum on average (4.9% vs 3.2%). After 2003/04, per capita TEH grew much slower than per capita GDP with average annual rates of 2.5% and 6.4%, respectively (Fig 2 & Table 2).

In 2007/08, government financing of health expenditure was HK\$38 809 million, which was the first time it was surpassed by private spending (HK\$40 137 million) in the last decade. This is the result of downward adjustment of Hospital Authority spending (and hence subvention) following 2003/04, coupled with the expansion of the private market as evident from the substantial growth of private health spending at a real rate of 8.4% per annum on average since 2002/03 (Fig 3 & Table 3). From 1989/90 to 2007/08, public expenditure grew 7.4% per annum on average (from HK\$10 892 million to HK\$39 139 million at constant 2008 prices), compared with a corresponding increase of 5.0% per annum on average (from HK\$16 678 million to HK\$40 479 million) for private expenditure, resulting in a growing share of public spending from 39.5% in 1989/90 to 57.8% in 2003/04, albeit a notable decrease afterwards to 49.2% in 2007/08 (Table 3).

As shown in Table 4, public spending was the major source of health financing since the establishment of the Hospital Authority in 1991, whereas private household out-of-pocket expenditure accounted for the second largest but decreasing share of TEH (from 42.6% in 1991/92 to 29.3% in 2003/04 and then rebounded to 34.9% in 2007/08). The next important sources of health financing were

employer-provided group medical benefits (7.4-10.6%), private insurance (1.2-6.0%), and other private sources of funding (0.8-2.2%). A growing number of households (mostly in middle-to-high-income groups) have taken out pre-payment plans to finance health care. As such, private insurance has played an increasingly important role in financing private spending (from 2.2% of total private spending in 1989/90 to 11.8% in 2007/08), whereas household out-of-pocket expenditure has decreased from 77.2% of total private spending in 1989/90 to 68.6% in 2007/08 (Fig 4 & Table 4).

Total expenditure on health by function

Of the HK\$78 946 million TEH in 2007/08, HK\$75 413 million (95.5%) was current expenditure and HK\$3533 million (4.5%) was capital expenditure (investment in medical facilities). Services for curative care accounted for the largest share (65.6%), which was made up of ambulatory services (33.7%), in-patient curative care (27.8%), day patient hospital services (3.7%), and home care (0.5%). The second largest share was for medical goods outside the patient care setting (11.4%). The remaining current expenditure was distributed among long-term care (4.8%), health programme administration and health insurance (4.2%), rehabilitative and extended care (3.7%), prevention and public health services (3.5%), and ancillary services to health care (2.4%) [Fig 5 & Table 5].

As a share of TEH, expenditure on in-patient curative care increased from 20.8% in 1989/90 to 28.0% in 2002/03 and remained stable at 27.5% to 27.8% thereafter, which reflects the spending pattern of the Hospital Authority as the largest provider of in-patient curative services. In comparison, expenditure on ambulatory services decreased from 42.1% in 1989/90 to 33.7% in 2007/08. In response to the escalating demand for private health care, private hospitals increased their capital expenditure, leading to an increase in investment in medical facilities from 2.2% to 4.5% of total spending over the period 2002/03 to 2007/08. Expenditure on day patient hospital services relative to total health spending also increased. This is likely to be a result of policy directives to shift the emphasis from in-patient to day patient and ambulatory care, which is in line with the international trend (Table 5).

Other health-related functions, which do not fall under the formal definition of TEH, accounted for 5.3% to 8.8% of total health and health-related expenditure. Of these, during 1989/90 to 2007/08, research and development in health, and environmental health grew 1.2 and 1.4 percentage points, respectively. By contrast, education and training of health personnel shrank 0.6 percentage point (Table 5).

Total expenditure on health by provider

In 1989/90, the largest share of TEH was spent on providers of ambulatory health care (44.5%), followed by hospitals

(28.0%). As a result of a gradual reduction in spending on ambulatory services and a corresponding increase in the number, service spectrum, and quality of hospitals during the period, by 1996/97 the situation had reversed. The share of hospitals (39.2%) surpassed that of providers of ambulatory health care (37.8%). In 2007/08, hospitals (43.1%) accounted for the largest share of TEH, followed by providers of ambulatory health care (29.7%). This service consolidation at institutions (as opposed to free-standing ambulatory clinics, most of which are staffed by solo providers) was similar across both the public and private sectors (Fig 6 & Table 6).

The downward trend in hospital share after 2002/03 was primarily driven by reduced expenditure of the Hospital Authority (the largest provider of hospital care), although there had been continued growth in corresponding private spending since 1997/98. Meanwhile, expenditure at providers of ambulatory services accounted for a relatively stable share after 2003/04.

Relative to TEH, expenditure on nursing and residential care facilities (which mainly provide long-term nursing care) doubled from 1.8% to 3.7% during 1989/90 to 2007/08, whereas expenditure on retail sales and other providers of medical goods decreased slightly (by 0.5 percentage point). Spending on other providers (including provision and administration of public health programmes, general health administration, and insurance) generally accounted for stable or increasing though less significant shares over the period.

Current expenditure on health by function and provider

Tables 7 and 8 show the current expenditure on health by function and provider in 2007/08, without taking into account capital expenses (ie investment in medical facilities).

Provider structure of spending by function

Most of the total current expenditure was expended on in-patient care (HK\$27 559 million or 36.5%). Hospitals (81.9%) accounted for most of this expenditure, followed by providers of ambulatory health care (9.1%), nursing and residential care facilities (8.1%), and providers in the rest of the world (0.9%).

The next largest share of total current expenditure was for out-patient care (HK\$26 593 million or 35.3%), which was accounted for by providers of ambulatory health care and hospitals in the ratio of 66.5% to 32.6%, with the remaining 0.9% by overseas providers. Among providers of ambulatory health care, the largest share of expenditure was for offices of medical practitioners (52.7%), followed by offices of dentists (9.4%) and offices of other health practitioners and other out-patient care facilities (4.4%).

Of the HK\$3455 million spent on services of day care (4.6% of total current expenditure), 79.9% was allocated to hospitals, 16.6% to nursing and residential care facilities, and 3.6% to providers of ambulatory health care. Expenditure on ancillary services to health care amounted to HK\$1859 million (2.5% of total current expenditure), of which 34.7% was paid to laboratories and diagnostic imaging facilities and 65.3% to other providers of ambulatory health care.

HK\$891 million (1.2% of total current expenditure) was spent on home care. Almost all of this expenditure was incurred at providers of home health care services (90.6%), with only 9.4% at nursing and residential care facilities.

Functional structure of spending by provider

Over 45% of total current expenditure was paid to hospitals (HK\$33 994 million). The hospital expenditure by health care function was distributed to in-patient care (66.4%), out-patient care (25.5%), and services of day care (8.1%).

The next largest share (31.1%) of current expenditure was spent on providers of ambulatory health care (HK\$23 439 million), of which 75.5% was for out-patient care, 10.7% for in-patient care, 7.9% for ancillary services to health care, and the remaining 5.9% for home care, services of day care, medical goods outside the patient care setting, and prevention and public health services. Among providers of ambulatory health care, offices of medical practitioners (both western and Chinese medicine) generated 83.5% of their revenue from out-patient care, 14.9% from in-patient care and substantially less from services of day care, medical goods outside the patient care setting, and prevention and public health services (1.6%).

Current expenditure on health by provider and financing source

Tables 9 and 10 show the current expenditure on health by provider and financing source in 2007/08.

Spending structure of financing sources

Public current expenditure on health amounted to HK\$36 763 million (48.7% of total current expenditure) which was mostly incurred at hospitals (76.0%), whereas private current expenditure (HK\$38 649 million or 51.2% of total current expenditure) was mostly incurred at providers of ambulatory health care (51.1%). This reflects the mixed health care economy of Hong Kong where public hospitals generally account for about 90% of total bed-days (80% of admissions) and private doctors provide about 70% of outpatient care.

Other major providers financed by public current expenditure included providers of ambulatory health care (10.0%), provision and administration of public health programmes (6.4%) and nursing and residential care facilities (6.0%). Apart from paying for providers of

ambulatory health care, private spending funded goods and services associated with retail sales and other providers of medical goods (22.4%), hospitals (15.7%) and general health administration and insurance (7.7%).

Employer-provided group medical benefits channelled 61.4% and 23.3% of their funds through providers of ambulatory health care and hospitals respectively, whereas private insurance channelled 38.2% and 19.7% respectively. Private household out-of-pocket payments funded a wide range of providers; the largest share was paid to providers of ambulatory health care (51.3%), followed by retail sales and other providers of medical goods (31.1%) and hospitals (13.4%). Such payments were mostly for private care but with a small fraction went to public hospitals as co-payments.

How different providers were financed

Of the HK\$33 994 million spent on hospital care, 82.2% came from general government revenue, 10.8% from private household out-of-pocket payments, 4.2% from employer-provided group medical benefits, and 2.7% from private insurance.

The next largest share of current expenditure was used to finance providers of ambulatory health care (HK\$23 439 million or 31.1%), followed by retail sales and other providers of medical goods (HK\$8899 million or 11.8%). The former had a mix of financing sources that included private household out-of-pocket payments (60.2%), employer-provided group medical benefits (16.1%), general government revenue (15.8%), private insurance (7.7%), and other private sources (0.2%). By contrast, the latter was predominately paid by households (96.0%) and substantially less by the government (2.6%) and non-profit organisations (1.3%).

Similarly, across nursing and residential care facilities and provision and administration of public health programmes, most expenditure was publicly financed (76.6% and 97.5%, respectively).

Current expenditure on health by function and financing source

Tables 11 to 13 show the current expenditure on health by function and financing source in 2007/08.

Functional structure of spending by financing source

Although both public and private spending were mostly expended on personal health care services and goods (92.0% of total current expenditure), their distribution among functional categories differed.

Public expenditure was targeted at in-patient care (53.1%) and out-patient care (24.3%). The remainder was distributed to services of day care (8.2%), prevention and

public health services (7.0%), and ancillary services to health care (3.6%).

In comparison, private spending was mostly concentrated on out-patient care (45.7%), medical goods outside the patient care setting (22.7%), and in-patient care (20.8%). Private household out-of-pocket payments were expended on various functions. The largest was on outpatient care (50.8%), followed by medical goods outside the patient care setting (31.4%) and in-patient care (14.8%). Private insurance mostly funded in-patient care (31.5%) and out-patient care (23.6%).

How different functions were financed

General government revenue funded 70.9% of expenditure on in-patient care. The remainder was from private household out-of-pocket payments (14.8%), employer-provided group medical benefits (8.8%), private insurance (5.4%), and other private funds (0.2%). Funding for out-patient care was more even: 52.5% from private household out-of-pocket payments, 33.6% was from the government, 9.5% from employer-provided group medical benefits, and 4.2% from private insurance.

Similarly, across home care and prevention and public health services, over 90% of the funding was from the government, and the remainder was from private household out-of-pocket payments (5.6% and 6.5%, respectively) and other private funds (<1%). Services of day care were also mainly financed by the government (87.4%), and the remainder was from private household out-of-pocket payments (12.5%) and other private funds (0.1%). Ancillary services to health care were funded by the government (70.5%), employer-provided group medical benefits (13.6%), private household out-of-pocket payments (8.6%), private insurance (7.0%), and other private funds (0.3%).

Medical goods outside the patient care setting were predominately funded by private household out-of-pocket payments (96.1%); only 2.6% and 1.3% were from general government revenue and non-profit institutions, respectively. As pharmaceuticals and other medical non-durables made up more than 75% of medical goods outside the patient care setting, the distribution of funds was similar (95.7% from private household out-of-pocket payments, 3.0% from the government, and 1.3% from non-profit institutions).

When stratified by public versus private providers, public care was largely funded by government revenue (mostly above 90% for individual functions and 94.6% overall). The subsidy levels for in-patient and out-patient care, which consumed nearly 80% of government funds at public facilities, were 96.8% and 88.4% respectively; the remainder was paid out-of-pocket by households. In contrast, households, employers and insurers were the major payers in the private market, making up 93.5% of total expenditure. As for private in-patient care (including long-term care in nursing homes), 82.3% of expenditure

was funded through private household out-of-pocket payments (38.5%), employer-provided group medical benefits (26.8%), private insurance (16.4%), and other private sources (0.5%), whereas government paid for 17.7%. Out-patient care was funded almost exclusively (99.6%) by private sources, namely households (77.3%), employers (15.3%) and insurers (6.7%), and others (0.2%).

International comparisons

Comparisons of TEH was made for Hong Kong and countries of the Organisation for Economic Co-operation and Development (OECD) using the health statistical database compiled and maintained by the OECD Secretariat. Such comparison cannot show whether a particular level of expenditure is appropriate. Instead, comparisons are useful in pointing out certain general patterns in spending. Hence, we should be mindful that comparisons of health expenditures and financing sources between countries or regions reflect each economy's own specific circumstances, societal values and solutions.

Table 14 provides the TEH as a percentage of GDP for selected OECD countries and Hong Kong in 1997, 2002 and 2007. In Hong Kong, TEH as a percentage of GDP was relatively low compared with OECD countries. Nonetheless, the Hong Kong health care system achieved service quality and health outcome that fared well by global standards, indicating cost efficiency and effectiveness. Besides, Hong Kong public health expenditure should be considered in conjunction with its low tax regime and stringent control on government expenditure. When scaled by the public revenue base, Hong Kong public spending on health was lower than most comparable economies (ie below the regression line in Fig 7).

On the other hand, private household out-of-pocket expenditure and private insurance (ie the sum of employer-provided group medical benefits and individually purchased private insurance) accounted for a large share of total health spending in comparison with OECD countries, despite Hong Kong not having a mandatory insurance scheme, ie social health insurance (Table 15).

Major differences between Hong Kong Domestic Health Accounts and Government Accounts

Notably, public health expenditure under HKDHA covers a wider scope than government expenditure under the health policy area group in Government Accounts (GA), and is therefore often higher than the latter.

Under the GA of the government budget, only direct expenditure by the Food and Health Bureau and the Department of Health (including the Bureau's allocation to the Hospital Authority), and expenditure directly related to health by other departments (such as the Government Laboratory) are counted as government expenditure under

the health policy area.

Under the HKDHA framework, apart from health expenditure classified under the GA, public health expenditures also cover other health-related functions performed by other government departments. These include health expenditure on nursing homes, rehabilitation and medical social services under the Social Welfare Department, and ambulance service under the Fire Services Department and Auxiliary Medical Service. All these are not included in the government expenditure under the health policy area in the GA.

The HKDHA is more comprehensive than the GA in terms of documentation of public health expenditure. As a result of the above difference, the HKDHA estimates on public health expenditure are essentially higher than corresponding GA estimates. The difference amounted to 15% to 17% in 2002/03 to 2007/08. Table 16 is a comparison of the estimated public health expenditures under HKDHA and GA.

Acknowledgements

We thank colleagues on the Domestic Health Accounts Steering Committee, including Annie Chan (Census and Statistics Department), Anmy Cheung (Census and Statistics Department), Clara Chin (Hospital Authority), Sian Griffiths (Chinese University of Hong Kong), Connie Hui (formerly Department of Health), KH Lee (Hospital Authority), Leo Lui (Hospital Authority), Connie Wong (Hospital Authority), Horace Yeung (Hospital Authority), for participating in the updating exercise and providing important input. In addition, we are grateful to the following organisations for facilitating data collection and compilation: Hong Kong Private Hospitals Association, IMS ChinaMetrik Ltd, The Medical Insurance Association of the Hong Kong Federation of Insurers and other data providers.
